SUMMARY

Software engineer with 6+ years building production web and mobile platforms (Angular, Ionic, React Native) for enterprise clients including Tata Power and Think Gas, now focused on applied ML and data engineering. Completed a postgraduate program in AI & Data Science at IISc Bangalore (probability, statistics, linear algebra, machine learning, deep learning, generative AI, Apache Spark). Hands-on with PySpark, scikit-learn, TensorFlow, LangChain/LangGraph, and MCP-based agentic systems. Combines a strong software-engineering foundation with a fast-growing, project-backed ML/data skill set.

SKILLS

- **Languages:** C, C++, Python, JavaScript, TypeScript, HTML & CSS
- **ML / Data:** Apache Spark (PySpark), scikit-learn, TensorFlow, pandas, SQL
- **GenAI / Agentic:** MCP (Model Context Protocol), LangChain, LangGraph
- **Web / Mobile:** Angular, Ionic, React Native, Node.js, FastAPI
- **Data stores:** MongoDB, SQL

ML / DATA PROJECTS

MCP Server & Client — Agentic Tooling Framework

- Built an MCP server/client pair exposing custom tools to LLM agents, enabling structured tool-calling and context management across multi-step agent workflows.
- Stack: Python, Model Context Protocol, LangChain/LangGraph.

Code: github.com/AbhilashPoshanagari/openAi_MCP_server | Demo: abhilashposhanagari.github.io/open_ai_mcp_client

Agentic Stock Screener

- Designed an agentic pipeline that pulls market data, applies rule-based and ML-driven screens, and summarizes candidate stocks via an LLM-driven reasoning loop.
- Stack: Python, LangGraph, pandas, external market-data APIs.

Demo: abhilashposhanagari.github.io/.../stock_screener

Image Classification Pipeline

- Trained and evaluated a CNN-based image classifier using TensorFlow, covering data preprocessing, augmentation, training, and accuracy/loss evaluation.
- Stack: Python, TensorFlow, scikit-learn.

Demo: abhilashposhanagari.github.io/imageClassification

TensorFlow Models — Iris Classifier

- Built and deployed a TensorFlow model on the classic Iris dataset as an interactive, browser-based demo.
- Stack: TensorFlow, TensorFlow.js.

Demo: abhilashposhanagari.github.io/tensorFlowModels/iris

Scalable ML on Apache Spark (Coursework Project)

- Implemented distributed data-processing and model-training workflows on Apache Spark, applying PySpark for feature engineering and pipeline scaling on large datasets.
- Stack: PySpark, Spark MLlib, SQL.

ADDITIONAL PERSONAL PROJECTS

- **Vulkan Basics** — low-level graphics programming exploration with the Vulkan API.
github.com/AbhilashPoshanagari/vulkan_basics
- **Kotlin Geo-Spatial (Ionic AR Plugin)** — custom Kotlin plugin bringing geo-spatial AR capability to Ionic apps.
github.com/AbhilashPoshanagari/kotlin_geo_spatial

WORK HISTORY

Senior Software Engineer — TRC Companies Inc.

Aug 2021 – Present

Lemur (AI Companion App)

- Built an AI companion app extending the Lemur Utility Management System, using an OpenAI LLM to answer natural-language questions about geographical utility assets (electrical, gas, infrastructure networks).
- Implemented deep-linking between Lemur and the companion app for seamless cross-app interaction and context handoff.

FieldOn Mobile Application

- Built the core mobile/web platform for utility-sector clients to create and manage dynamic, configurable business workflows and digital forms.
- Enabled field users to complete and submit forms from mobile devices for admin review, supporting rapid, industry-specific deployment on a shared platform.

Think Gas — Quality Construction Management App

- Developed a field-operations app for a gas pipeline construction company, using dynamic, activity-based forms to digitalize construction and inspection data capture.
- Improved data accuracy and workflow visibility across distributed field teams.

Tata Power — DynamicForm-FieldOn

- Built a mobile/tablet app for Tata Power field employees and business associates to complete dynamically generated business forms and manage geographic utility assets on an interactive map.
- Improved operational efficiency and streamlined field-to-office data collection.

Software Engineer — Trans Global Geomatics Pvt Ltd.

Jan 2020 – Jul 2021

MARKFED (Government Procurement Tracking)

- Built a GPS-based vehicle tracking application for a government paddy-procurement program, monitoring transport of paddy from procurement centers to storage centers.

Dost (Hybrid E-commerce / Services App)

- Built a hybrid mobile app connecting skilled workers (e.g., electricians) with clients, including Google/Facebook login and location-based service discovery.

EDUCATION

- Postgraduate Certificate, Computational Data Science — Indian Institute of Science (IISc), Bengaluru, 2025
- PG Diploma, Electronic Product Design — CDAC, Hyderabad, 2016
- B.Tech, Electrical & Electronics Engineering — Moghal College of Engineering & Technology, Hyderabad, 2015

CERTIFICATIONS

- Scalable Machine Learning on Big Data using Apache Spark — coursera.org/share/b882df16dfe9bffe0ad9f85542007e77
- Machine Learning with Python — coursera.org/share/b9a668f07d5cd39fc7f3b26b6d2d30a6
