SUMMARY

I am a passionate Data Scientist with over 5 years of experience in Angular and Ionic development, now transitioning into AI and Data Science. I recently completed a one-year Post Graduate program in AI and Data Science from IISc Bangalore and NSE TalentSprint, where I gained strong foundations in probability, statistics, linear algebra, and calculus, along with practical experience in machine learning, deep learning, generative AI, and scalable AI systems. My training also included data engineering with Apache Spark and business analytics. With a unique blend of software engineering expertise and data-driven problem-solving skills, I am eager to apply advanced analytics and AI techniques to real-world challenges and drive data-informed decision-making.

SKILLS

- C, C++, Python, Javascript, Typescript, html & css
- mongodb, SQL, NodeJS, Fast api..
- React native, Ionic with Angular, Angular, Tensorflow.
- MCP, Sci-kit learn, Tensorflow, Apache spark.

EXPERIENCE

TRC companies Inc.

Aug 2021- Present

ML Engineer

Lemur (AI Companion app)

Lemur AI Companion is an intelligent support application designed to extend the capabilities of the Lemur Utility Management System, which manages geographical utility assets such as electrical, gas, and infrastructure networks. The companion app leverages OpenAI's Large Language Model (LLM) to allow users to ask natural language questions about their assets. The LLM processes these queries, extracts key features, and connects to internal servers to deliver accurate, context-aware responses. Communication between Lemur and Lemur AI Companion is seamlessly handled via deeplinking, enabling smooth interaction between both applications.

FieldOn.

FieldOn serves as the core product for utility sector clients, providing a scalable platform for creating and managing dynamic business workflows. Through the FieldOn Web Portal, administrative users can configure, assign, and manage digital forms tailored to specific operational needs. Field users receive these forms on mobile devices, complete them in the field, and submit the data back to administrators for review and verification. The platform supports extensive customization for different customer use cases, enabling rapid deployment of industry-specific solutions built on a common, robust foundation.

Think Gas customer meter data.

The Quality Construction Management application was developed for Think Gas, a gas pipeline construction company, to digitalize and streamline field operations. The app allows field employees to record real-time construction and inspection data through dynamic, activity-based forms that adapt to the user's daily tasks. Administrators can configure and manage these forms via a web-based platform, ensuring flexibility and centralized control. This solution improves data accuracy, enhances workflow visibility, and supports efficient project management across field operations.

Tata power DynamicForm-FieldOn.

FieldOn is a mobile and tablet application developed for Tata Power employees and business associates to streamline business process workflows. The app enables users to fill dynamically generated business forms, which are created and managed by account administrators through the FieldOn web portal. It also integrates geographical asset management features, allowing users to view, search, and perform asset-related form actions directly on an interactive map. This solution enhances operational efficiency and ensures seamless data collection from field teams.

Trans Global Geomatics Pvt Ltd.

Jan-2020 - July-2021

Software Engineer.

Markfed

MARKFED is a Govt Organization that procures paddy from farmers. Farmers bring the paddy to the procurement centers (PC) to deposit paddy. Once the paddy is deposited at PC(procurement centers), Govt authorized transporters will transfer the paddy from PC to Storage centers (SC). The vehicles fitted with GPS Trackers will be monitored using this application.

Dost

We designed a Hybrid mobile app for ecommerce. In this App User skills will be posted like Electricians who do electrical work and clients can get the service easily. features login with google login with facebook and location service.

EDUCATION

- PG-level advanced certification, computational data science, IISc, Bengaluru, Karnataka, India, 2025.
- PG-deploma, Electronic product design, CDAC, Hyderabad, Telangana, 2016.
- B-tech., Electrical and Electronic Engineering, Moghal college of Engg & Tech, bandlaguda, hyderabad, 2015.

CERTIFICATES

- [Introduction to data science.](#)
- [Python for Data Science and AI.](#)
- [Data Analysis with Python.](#)
- [Data Visualization with Python.](#)
- [Machine Learning with Python.](#)
- [Scalable Machine Learning on Big Data using Apache Spark.](#)

PERSONAL PROJECTS

- [MCP server.](#)
- [Vulkan basics.](#)
- [Kotlin geo spatial \(ionic AR plugin \).](#)

PORTFOLIOS

- [MCP client.](#)
- [Image classification.](#)
- [Stock screener agentic ai.](#)
- [Tensorflow Models.](#)
